

awaVision™

Water Quality Monitoring System

Continuous monitoring of fish behavior
for detection of water contamination

awaVision™ is an automated monitoring system that constantly looks out for abnormal fish activity patterns and then alert the operator at the control station.

- Contributes to enhance the safety of drinking water as a strategic resource
- A relatively cost-competitive solution compared with other state-of-the-art
- Potential extension of solution to analyze activities of other organisms
- Quick response time after occurrence of events
- 24/7 automated monitoring
- Low reagent consumption and low maintenance cost

**Main Contractor for
PUB in Fish Activity
Monitoring System
(FAMS). Maintaining
FAMS island wide in
Singapore and Johor.**

Analysis of fish activities by computer vision
